

Normal electrical cardiograph:

* systole:
contraction

* diastole:
relaxation

- P wave: atrial depolarization
- QRS complex: depolarization of ventricles
- PR interval: atrial depolarization & conduction through AV node
- T wave: repolarization of ventricles
- QT interval: Depolarization & repolarization of atriums
- PR: Length of time it takes for electrical impulse to travel from atria to ventricles.
